

Final Project

a presentation of ideas and concepts

1. Music Visualizer

in Processing with Minim library

Lines in 3D (pic: **Ten Walls** live)

Unique Object (pics: **Porter Robinson** 'Worlds' tour, **Daito Manabe** 'Sensing Streams')

and ideas from
Generative Design
page 227 & 331

Image Collage (pics: **Porter Robinson** 'Worlds' tour)

and ideas from
Generative Design
page 229

Attributes

- beat sync mode ON or OFF: fluidity for both modes
- looping stages with randomness each time
- parameter control (possibly with GUI)
- a lot of mesh distortion & image manipulation
- runs in Java (Processing with Minim library)

2. Generative agents in a 3D grid system

in Processing or p5.js

marius watz

Attributes

- infinitely continuous
- grid space fixed but adjustable
- parameter control (possibly with GUI):
 - speed
 - colors
 - randomness vs noise
 - camera control
- ability to 'print'

3. Challenging Game

in Processing or p5.js

Difficulty - Inspirations

N+

Dextris

QWOP

Hohokum - aesthetic

Attributes

- intuitive learning
- tougher over time (not with artificial difficulty; same levels)
- diverse color palette
- addictive
